Top 5 most frequent cancers excluding non-melanoma skin cancer (ranked by cases):
- Colorectum
- Breast
- Cervix uteri
- Leukaemia
- Non-Hodgkin lymphoma

Numbers at a glance

Total population
114 963 583

Number of new cases
77 352

Number of deaths
51 865

Number of prevalent cases (5-year)
130 858

Data source and methods

Incidence
Country-specific data source: Addis Ababa City Cancer Registry
Method: Most recent rates from a single registry applied to 2020 population

Mortality
Country-specific data source: No data
Method: Estimated from national incidence estimates by modelling, using incidence:mortality ratios derived from cancer registry data in neighbouring countries

Prevalence
Computed using sex-, site- and age-specific incidence to 1-, 3- and 5-year prevalence ratios from Nordic countries for the period (2006-2015), and scaled using Human Development Index (HDI) ratios.
In Table 2, we present age-standardized (World) incidence and mortality rates, top 10 cancers for both males and females. The data are organized by cancer site, with columns indicating the number of new cases, deaths, and 5-year prevalence (all ages) for both genders. The table also includes a section for all cancer sites combined. Each row represents a specific cancer type, and the data are presented in a clear, easy-to-read format with percentages and rates per 100,000 population.
